

# Evaluating a Cross-Platform Cancer App using Flutter

November 8, 2024

Presented by,  
Anisha A S (TKM23MCA-117)  
Department of MCA

Guided by,  
Dr. Sheeba Krishnan  
Department of MCA

# HEALMATE: Cancer Counseling App

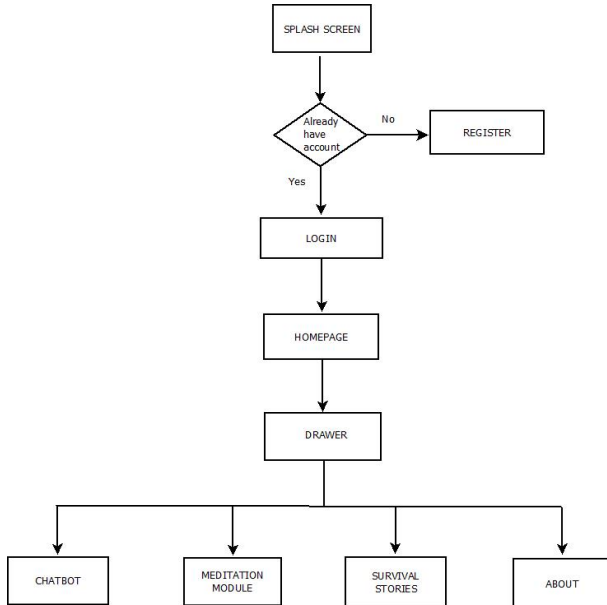

## PROBLEM DEFINITION

- Assess Cross-Platform Frameworks:
  - Evaluate the effectiveness of Flutter for seamless multi-platform app development in healthcare.
- Support Cancer Patients:
  - Develop an app offering chatbot communication, meditation modules, and survival stories for cancer patient support.

# TOOLS AND TECHNOLOGIES USED

- **Flutter:** An open-source UI framework by Google for building cross-platform applications with a single codebase.
- **Firebase:** A backend platform by Google used for real-time database management and user authentication.
- **Gemini API:** Used to facilitate real-time data access and enhance app functionality through secure API calls.
- **GitHub:** A version control platform used for managing code, tracking changes, and collaborating on the project.

## About

# FUTURE ENHANCEMENTS

- **Personalized Cancer Risk Prediction:** Integrate a machine learning model to assess cancer risk based on user details like age, gender, family history, and lifestyle factors, Genetics
- **Multi-language Support:** Expanding the app's reach by offering multi-language support for better accessibility across diverse communities.
- **Community Support Groups:** Adding a feature for peer support groups, where patients can connect and share their experiences anonymously.
